## CHOOSING A PROGRAM

### Would you like to:

- take university courses with local students
- engage in directed research at a field station/conduct field-based independent study
- participate in service-learning
- undertake an internship for academic credit\*
- conduct comparative international study\*

### Evaluate how important it is to:

- have structured classroom /or field-based study?
- to stay in an area developing roots /or experience different communities, ecosystem

### Consider whether you want to:

- participate in work that has been identified as an area of need by a local community, or
- research your own question/topic

### Reflect on your tolerance for

- group work
- sub-standard living conditions

### Be aware:

- field-based programs with no pre-requisites (and even some with) will have students who do not have the background of a Cornell junior studying science.
- Emphasis will be on unique local ecosystem(s), may include social science components (environmental policy, conservation management, or sustainable development)
- Programs that may sound similar can vary significantly in the academic approach
